                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This DNA sequence codes for the novel 97.2 kDa surface exposed protein Omp5 (see AAW88418) of the human respiratory pathogen chlamydia pneumoniae. By generating antibodies against C. pneumoniae outer membrane complex, a polyclonal antibody (PAB 150) cwas obtained which reacted with outer membrane proteins. The cantibody was used to identify the genes (see AAX06816-27) encoding CC Omp4-Omp15 proteins (see AAX88417-28) in an expression library of CC. pneumoniae DNA. The genes are situated in 2 gene clusters: CC Omp12,11,10,5,4,13 and 14 in one cluster and Omp6,7,8,9 and 15 in the other, and encode polypeptides of about 89.6-100.3 kDa and cc the other, and encode polypeptides of about 89.6-100.3 kDa and 20 cmp4-Omp15 or detecting including humans) infected with Chlamydia pneumoniae. The test comprises detecting antibodies specific test comparates considered with Chlamydia comp4-Omp15 or detecting nucleic acid fragments encoding these outer membrane proteins, especially by PCR. The proteins are also used in the diagnostis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization of mammals. The nucleic acids and proteins can also be used in the immunization of mammals. The proteins for effecting in vivo expression of antigens. The caccines may also prevent atherosclerosis and bronchial asthma, which are possibly associated with C. pneumoniae.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                be used for diagnostic purposes, for their enzymatic or structural cativity, or as a vaccine. The invention also describes (1) a probe comprising a hybridizing fragment of N1; (2) an isolated nucleic acid (N2) that hybridizes under stringent conditions to N1; (3) an expression cassette comprising N1 under the transcriptional regulation of a transcriptional initiation region functional in an expression host, and a transcriptional termination region; (4) a cell comprising an expression cassette of (3) as part of an extrachromosomal element or integrated into the genome of a host cell as a result of induction of the expression cassette into the host cell as a result of induction of the host cell; (5) a method for producing a P1 comprising growing a cell of (4) where the protein is expressed and isolating the protein free of other producings; (6) a purified polypeptide composition comprising at least 50 weight % of P1; and (7) a monoclonal antibody binding specifically to the peptide of (6).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2761
                                                                                                                                                                                                                                                                                                                                                                                                                                                              pneumoniae protein (P1), given in the specification. The isola
acid is useful for diagnostic and analytical methods, such as,
hybridization based assays or amplification based assays. The

                                                                                             (PCR) assays. Antisense sequences may be used to down regulate expression of the proteins and may be used to treat infections. The nucleic acids may also be used to produce the protein antigens they encode according to standard recombinant DNA methodologies. The proteins may then be used as antigens for the production of antibodies (i.e. as vaccines) for preventing infection by Chlamydia. The antibodies may also be used as diagnostic reagents for detecting infections. Chlamydia is a pathogen implicated in the development of (for example) community acquired pneumonia, upper respiratory tract disease (especially bronchitis and sinusitis, asthmatic bronchitis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence encodes a Chlamydia antigen of the invention, designated CPN100635. The nucleic acids (and their complementary sequences) may be used as diagnostic agents for detecting the presence of nucleic acids encoding Chlamydia antigens in samples according to standard methods, and therefore, for diagnosing Chlamydia infections. For example, they represent the presence of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  망
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ş
                                                                    This DNA sequence encodes the novel surface exposed protein Omp5 (see AAW88429) of Chlamydia pneumoniae, a human respiratory pathogen. It is described as a subsequence of a claimed nucleic acid fragment (see AAX06817) encoding Omp5 (see AAW88418). The invention provides a new species specific test for identifying mammals (including humans) infected with C. pneumoniae. The test comprises detecting antibodies specific for surface exposed proteins Omp4-Omp15 (see AAX088417-28) or detecting nucleic acid fragments encoding them (see AAX06816-27), especially by PCR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization of mammals, the nucleic acids being particularly useful as DNA vaccines may also reflecting in vivo expression of antigens. The vaccines may also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Species-specific test for identifying mammals infected with Chlamydia pneumoniae - comprises detecting antibodies specific for outer membrane proteins of C. pneumoniae or nucleic acids encoding
